

YOUR ENERGY INFRASTRUCTURE SHOULD PROTECT YOUR BUSINESS.

Not compete with it for capital.

Lower energy cost, stronger resilience and the right funding route—
built around your actual operation.

START MY ENERGY SNAPSHOT →

No obligation • Practical options • Clear next step

YOUR ENERGY RISK IS BIGGER THAN THE BILL.

The real cost appears in margins, downtime, diesel use and delayed investment.

RISING TARIFFS

Operating costs climb while margins tighten.

UNPLANNED DOWNTIME

Production and service stop when power fails.

EXPENSIVE BACKUP

Diesel and emergency power protect uptime—at a price.

CAPITAL PRESSURE

Buying the wrong system can drain cash unnecessarily.

THE ANSWER IS NOT “MORE SOLAR”. IT IS THE RIGHT ENERGY AND FINANCE STRUCTURE.

YOUR LOAD PROFILE DRIVES THE SOLUTION.

Different operations use power differently. The design must reflect that.

FARMING & AGRICULTURE

Irrigation • cold rooms • packhouses • mills

Use daytime solar and protect essential loads.

COMMERCIAL

Offices • retail • hospitality • portfolios

Control operating costs across one or many sites.

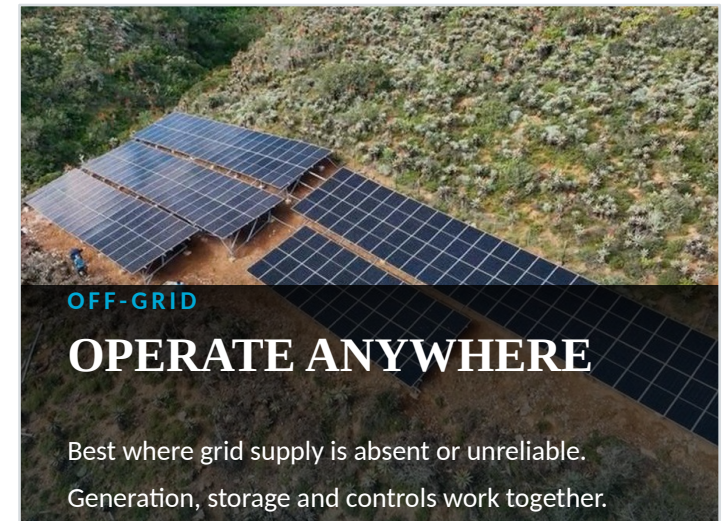

INDUSTRIAL & MINING

Factories • processing • heavy operations

Support uptime, peak demand and critical production.

CHOOSE THE OUTCOME. WE ENGINEER THE SYSTEM.

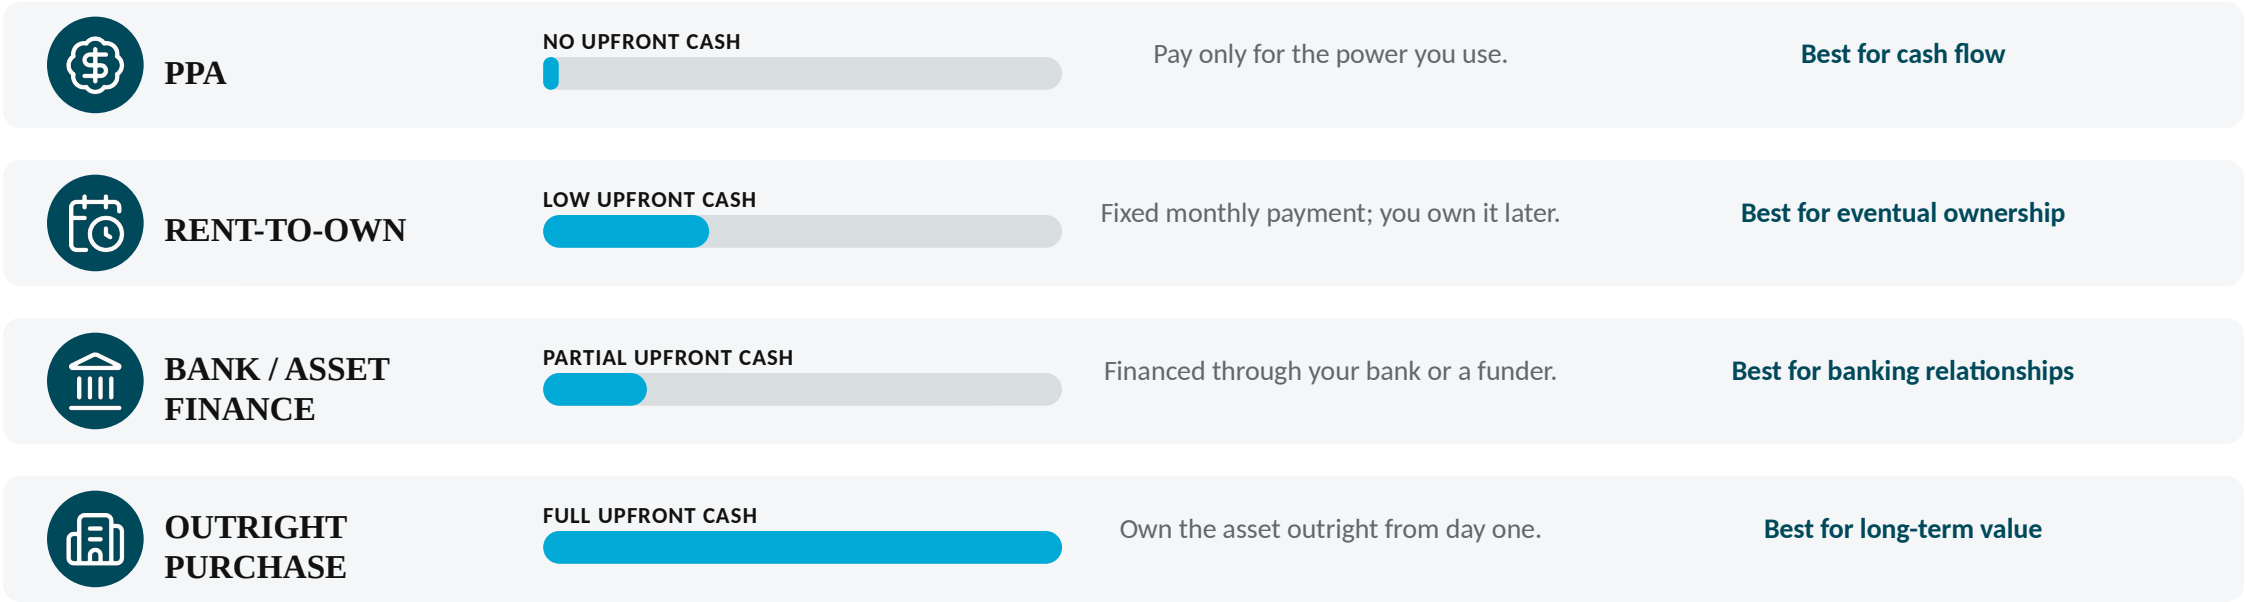

No technology theatre. The solution follows your operating priority.

Every system remains subject to site, load, grid, technical and commercial assessment.

THE CHEAPEST RATE IS NOT ALWAYS THE BEST ENERGY DEAL.

Compare cash required, monthly cost, ownership and long-term spend—not interest alone.

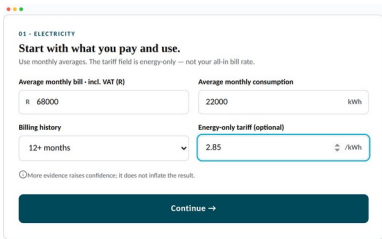

Bank and asset-finance terms vary by provider, credit profile and project. Chariot compares the complete commercial outcome.

START WITH FACTS. NOT A GENERIC SOLAR QUOTE.

We use your real energy data to show which route deserves deeper work.

1
YOUR BILL

01 - ELECTRICITY
Start with what you pay and use.
Use monthly averages. The tariff field is energy-only — not your all-in bill rate.

Average monthly bill - incl. VAT (R) Average monthly consumption kWh

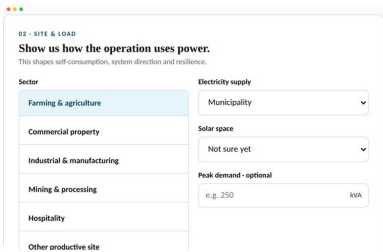

Billing history Energy-only tariff (optional) /kWh

☐ More evidence raises confidence; it does not inflate the result.

Cost, tariff and usage

2
YOUR LOAD

02 - SITE & LOAD
Show us how the operation uses power.
This shapes self-consumption, system direction and resilience.

Sector Electricity supply

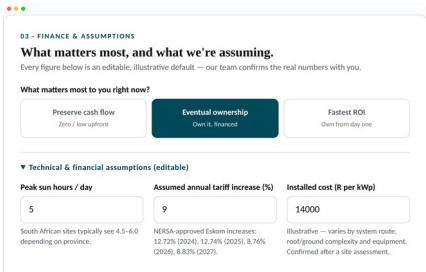

Commercial property Solar space

Mining & processing kWh

Hospitality

Daytime and critical demand

3
YOUR SITE

03 - FINANCE & ASSUMPTIONS
What matters most, and what we're assuming.
Every figure below is an editable, illustrative default — our team confirms the real numbers with you.

What matters most to you right now?

☐ Preserve cash flow
Zero / low upfront

☒ Eventual ownership
Own it, financed

☐ Fastest ROI
Own from day one

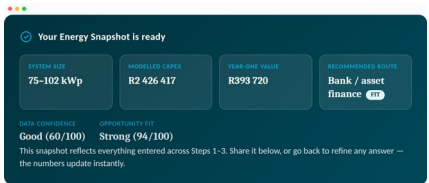

▼ Technical & financial assumptions (editable)

Peak sun hours / day Assumed annual tariff increase (%) Installed cost (R per kWp)

South African sites typically see 4.5–6.0 depending on province. NERSA approved Eskom increases: 12.72% (2024), 12.74% (2025), 8.76% (2026), 8.83% (2027). Illustrative — varies by system route, roof/ground complexity and equipment. Confirmed after a site assessment.

Roof, land and grid reality

4
YOUR OPTIONS

✓ Your Energy Snapshot is ready

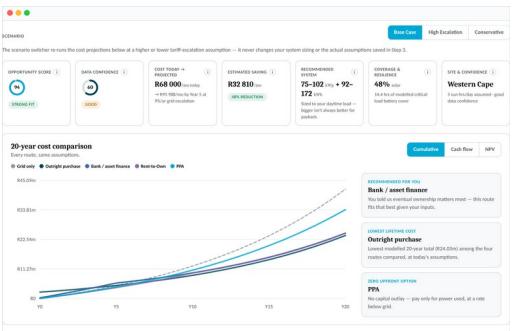

SYSTEM SIZE MODELLED CAPEX YEAR-ONE YEARN RECOMMENDED ROUTE

DATA CONFIDENCE OPPORTUNITY FIT

This snapshot reflects everything entered across Steps 1–3. Share it below, or go back to refine any answer — the numbers update instantly.

System and funding routes

5
YOUR DECISION

04 - YOUR DECISION

The scenario switcher to view the cost projections below at a higher or lower tariff escalation assumption — it never changes your system sizing or the actual assumptions based in Step 3.

Scenario switcher: ☐ High Escalation ☒ Conservative

20-year cost comparison

Capex only ☒ Ongoing purchase ☐ Bank / asset finance ☐ Net-zero ☐ PPA

Recommendation: **Bank / asset finance**

Overnight purchase: Lowest installed (30-year total R24.85/kWh) among the four routes compared, at today's assumptions.

Zero-upfront option: PPA: No upfront outlay — pay only for power used, at a rate below grid.

Proceed, refine or stop

YOUR ENERGY SNAPSHOT: A CLEAR FIRST VIEW—NOT A SALES ESTIMATE.

commission

05

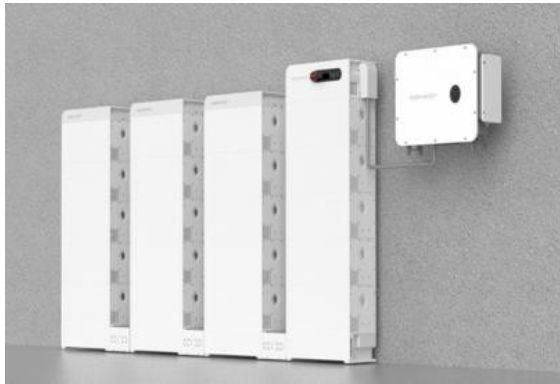

SUPPORT

Monitor, maintain and
optimise

You keep one clear point of accountability while specialist partners perform defined project roles.

SELECTED FOR YOUR SITE. SUPPORTED FOR THE LONG TERM.

Technology is chosen for performance, warranty, serviceability and project bankability.

MODULAR

SERVICEABLE

SCALABLE

Open architecture allows the design to follow the project—not a preferred product catalogue.

REAL OPERATIONS. REAL ENERGY REQUIREMENTS.

Selected experience across Chariot, its team and delivery network.

3.5 MW

Industrial foundry • South Africa

1 MW

Remote hospitality • Angola

1.2 MW

Commercial mill • South Africa

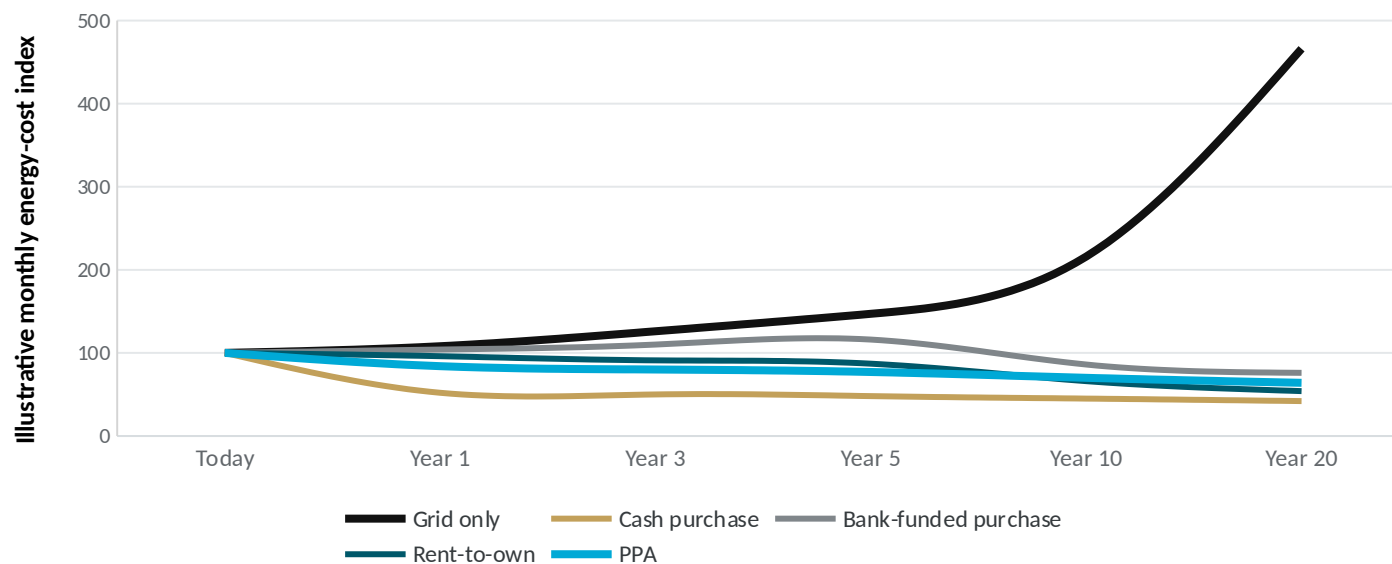

750 kW

Industrial steel mill • Tanzania

250+ MW REPORTED COMBINED EXPERIENCE ACROSS THE TEAM AND DELIVERY NETWORK

SEE THE TRUE COST OF EVERY ROUTE.

One comparison using your bill, your tariff, your site and the finance quotes available to you.

COMPARE

Grid-only • cash • bank loan • asset finance • rent-to-own • PPA

MEASURE

Upfront cash • monthly payment • escalation • cumulative spend

DECIDE

Savings • ownership • payback • resilience • next-best action

ILLUSTRATIVE OUTPUT — NOT A QUOTE

The live Snapshot recalculates from client inputs and verified quotes.

BIG ENOUGH TO STRUCTURE IT. CLOSE ENOUGH TO SHOW UP.

A relationship-led South African team supported by aligned technical and funding partners.

WE LISTEN FIRST

The solution begins with your operation.

WE SHOW THE OPTIONS

Compare funding and ownership clearly.

WE STAY ACCOUNTABLE

One route through design and delivery.

WE THINK LONG TERM

Support continues after commissioning.
